PASSION FOR DEVELOPMENT

One of the key elements of passion for development is constant learning and expanding knowledge. Brego company is highly-motivated, which stimulates us to continuous improvement of our skills and abilities. This is also a drive to create something new. Every day we produce something unique for ourselves and others.

The new collection is expected to bring superior quality and comfort, which are absolutely required for satisfaction of Brego customers.

YOU are
the EXPERT

TECHNOLOGIES

The quality of the products on our offer is a key element of Brego sales strategy. Therefore, we are constantly observing the market and upgrading the production process. With our innovative technology, each cut of the fabric is precise to the millimeter, and the material does not fray along the cut edges. State-of-the-art solutions help us not only achieve the desired effect, but also take care of the environment by minimizing waste.

With innovative production process, qualified specialists as well as top grade of fabric we have no doubts about the highest quality of our products.

WORKWEAR FROM DESIGN TO PRODUCTION

We design, test and manufacture workwear ourselves. Each piece of clothing is the product of years of experience and our commitment to the user. Close cooperation with the existing and new customers results in durable work clothes suitable for the area of application and which are a pleasure to wear.

1

WORKWEAR DESIGN

The design is first created by Brego's chief designer, and then it is improved based on suggestions from the design team. The design takes into account the cut, fabrics, colors, style, finishing as well as the quantity and type of materials needed for production.

2

PROTOTYPE DEVELOPMENT

Based on the design, Brego creates the prototype of workwear. It is used to evaluate the appearance, quality, comfort and functionality of garment, as well as to make alterations before the product is put on the market.

3

TESTING AND ALTERATIONS

Having created a prototype, we proceed to testing. Tests are carried out by workers of different sizes and body shapes and they involve fitting, testing materials and resistance to damage and much more.

4

PRODUCTION

Once the workwear design has been approved and the prototype tested and improved, we can proceed to production. At this stage, we need the appropriate machinery and tools for production, as well as materials and accessories. Brego uses various materials in the production of its workwear. Depending on the type of clothes, we use fabric with different properties and special sewing techniques that ensure durability and seam strength.

5

QUALITY CONTROL

Quality control is an essential part of our workwear production process. This is to detect any imperfections or errors that might affect the final product. Quality control is also important for ensuring quality standards and customer satisfaction.

6

DISTRIBUTION

Following the quality control, our workwear is ready for distribution. At this stage, we select the distribution channel to deliver the product to the customer as quickly as possible.

7

CUSTOMER SERVICE

Für Brego ist ein zuverlässiger Kundenservice ein wichtiges Element im Bekleidungsproduktionsprozess. Wenn Sie Fragen haben, können Sie sich jederzeit an uns wenden, um Hilfe zu erhalten.

Every stage from design to production involves time, commitment and effort to achieve the ultimate result, which is exceptional workwear.
